DETAILED ACTION

Amendment

1. Receipt is acknowledged of the Amendment filed February 13, 2006.

Remarks

2. The pending claims 1-28 were discussed during a telephone interview conducted February 10, 2006. Specifically, independent claims 1, 11, 21, and 28 were discussed with respect to the meaning of the term "digital rights" and the difference between the prior art and the current claims with respect to the disclosed meaning of digital rights. The applicant emphasizes that managing digital rights, which is often referred to in the art as "Digital Rights Management" (DRM), is a term of art and is explained in the specification (page 12) that digital rights information is used "...to access and use the digital content in accordance with the access rights information and the usage rights information. The usage rights information may include at least one read-only rights, print rights, download rights, save rights, and distribution rights." Therefore, as known the art, and explained the specification, DRM relates to the restricted access and use of digital content. Further disclosed by the applicant is a definition according to Wikipedia.org, which defines DRM as the following: "handles description, layering, analysis, valuation, trading of the rights held over a digital work." Using the applicant's definition, DRM as used in the independent claims is distinct from the validation, which is taught by prior art Surloff et al. Validation allows a user to either access a network or prevents a user from accessing a network depending on the credentials of the user where as DRM controls how digital content is consumed.

Allowable Subject Matter

3. Claims 1-28 are allowed.

The following is an Examiner's statement of reasons for allowance: The prior art of record, taken alone or in combination, fail to teach or fairly suggest the system, method, or data card used for managing digital rights of digital content over a network as is disclosed in claims 1, 11, 21, and 28 of the current invention. The claimed apparatus and method include using a data card, which contains user information including digital rights information specific to a user, wherein the data card has a memory component for enabling information to be stored within the data card. The method and system include the an application program resident on the memory component of the data card, wherein the application program is configured to operate in conjunction with a universal language for creating and controlling digital rights, to manage user rights of the digital content available on the network based on the digital rights information specific to the user which is contained on the data card. The combination of all of the limitations discussed above are not disclosed in prior art, and moreover, one of ordinary skill in the art would not be motivated to come up with the claimed invention.

Conclusion

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to *Allyson N. Trail* whose telephone number is (571) 272-2406. The examiner can normally be reached between the hours of 7:30AM to 4:00PM Monday thru Friday.
